Assignment (GUI)

You need to build a system using GUI (Graphics User Interphase) regarding Car Management system. To do so you need fulfill some certain criteria which are given below.

- Divide your page / UI into 2 parts above part will be for entering data of new cars & 2nd part or the part below will contain the features of searching
- In first part Add some fields to enter information about new/used car you want register in your system. There will be some fields like Brand_name, Model_name, Milage,Price and a button named register. So, after entering all the data in the fields if one presses register then the system will store all the data in a file.
- 2nd part or the part below will contain the searching part. There will be 2 search bar/ fields and 2 search which are aligned with their corresponding search bars & a text area. One search bar will be used to search any car via their Brand Name and 2nd Search bar Will be used to search via their model's name. When the search button will be pressed the resultant Cars All the necessary information will be shown in That Text area.
- Add 2 more fields and a search button to search car in price range. One will contain upper limit and Another will contain Lower Limit. When that Search button will be placed the resultant cars in that price range will be shown with their necessary information in the text area.
